# ERP Environment Access & Data Policy

## 1. Connection Details

- **Frontend:** http://35.154.32.180:3000
- **Backend Admin:** http://35.154.32.180:8000/admin/

## 2. Deployment Strategy: "Freeze & Test"

To facilitate testing, we have implemented a **"Deploy & Freeze"** strategy.

- **Current State:** The server has been deployed with the latest code (Build #17).
- **Pipeline Status:** The automated CI/CD pipeline is **paused**.
- **Why?** This ensures the server does not restart unexpectedly, allowing the testing team to work without interruption.

## 3. Data Persistence (Important)

- **SAFE:** Any data you enter today (Users, Products, Transactions) **WILL BE SAVED**. It will persist across days as long as we do not deploy new code.
- **WARNING:** When the team requests a **code update** (e.g., to fix a bug), we will have to run the pipeline. **At that specific moment, the database will be reset.** We will notify you before this happens.

## 4. Admin Access

The default database was empty. A Superuser has been manually created for testing.

- **Username:** stackly@dev.com
- **Password:** *Stacklydev*
